

## Bin-Sense Terminal Box Installation

Bin-Sense Terminal Boxes connect either six or nine cables (depending on the type) to a remote or master unit. Each cable grip can hold three to four link cables.

1. Install the Terminal Box near the remote or master unit with the cable grips facing toward the ground.
2. Pass a link cable through one of the cable grips.
3. Strip a few inches of the black outer jacket off of the link cable.
4. Use a small flat screwdriver to lift an orange tab for the red wire and another for the black wire.
5. Place the red and black wires in the correct terminal and press down the orange tab until it locks. There is no need to strip the insulation off the black and red wires.
6. Repeat steps 2 through 5 for all remaining link cables.
7. Close the enclosure lid and tighten the cable grips.

Step 5

Completed wiring
